PRESENTATION GIVEN AT ECOSYSTEM SERVICES WORKSHOP ENTITLED:

"FORESTS, CLIMATE CHANGE, AND ECOSYSTEM SERVICES TRAINING"

MAY 11-13, 2009

PRETORIA, SOUTH AFRICA

HOSTED BY

CENTER FOR INTERNATIONAL FORESTRY RESEARCH, WORLD AGROFORESTRY CENTER, FOREST TRENDS, THE KATOOMBA GROUP AND USAID/EGATS CLIMATE CHANGE, FORESTRY, AND LAND TEAMS

This workshop was generously supported by the American people through the United States Agency for International Development (USAID) under the terms of the TransLinks Cooperative Agreement No.EPP-A-00-06-00014-00 to the Wildlife Conservation Society (WCS). TransLinks is a partnership of WCS, The Earth Institute, Enterprise Works/VITA, Forest Trends and the Land Tenure Center. The contents are the responsibility of the authors and do not necessarily reflect the views of USAID or the United States government.

Alice Ruhweza

Forest Trends/The Katoomba Group-East & Southern
Africa

+ About the ESA Katoomba Group

- Informal network aimed at sharing intelligence about new developments related to PES; identifying gaps in PES theory and practice and tackling key obstacles not being addressed by other players; and addressing significant challenges related to payments for ecosystem services. Our strength is partners! (ICRAF, CAPE, etc) Key Areas of Work in ESA include:
 - Promoting dialogue and capacity building for PES through Katoomba Group Meetings/Learning Events: (West Africa)
 - Linking projects to markets through the Katoomba Incubator:
 - Support to REDD Readiness Strategies and Planning: REDD Project Type Mapping and PLI analysis in TZ & UG
 - Engaging the Private sector in Markets and Payments for ES
 - Sharing information, best practice: Newsletters, Ecosystem marketplace etc.

	Total number of projects recorded in 2005	Total number of projects recorded in 2008	Number of Projects where payments had exchanged hands in 2005	Number of Projects where payments had exchanged hands in 2008
Biodiversity	18	19	2	5
Carbon	17	27	5	10
Water	10	16	2	4
Bundled		6	0	
TOTAL	45	68	9	19

2005-2008 PES Assmt Findings

- Growth from 45 to 68 PES and PES-like initiatives between 2005 and 2008/ More money exchanging hands/Considerable diversity of projects and different types of payments being made
- Long gestation period and lack of assurance on projects moving from design to implementation- preliminary work does not promise full, successful implementation.
- No 'one size fits all' approach throughout the region, as the focus <u>and definition</u> of PES projects and approaches varies from country to country.
- Few legal and policy changes have been made accommodate PES, however, this has not been a major constraint to the development of pilot level projects- legal and policy support, while important, should not be the focus on significant resources prior to addressing other obstacles.

+ Payments for Carbon Sequestration

■ SEQUESTERING CO2 BY TREE PLANTING:

- Trees for Global Benefits program: supports smallholder farmers in western Uganda to plant trees for carbon sequestration. Cash payments made on the basis of tons of carbon sequestered per hectare; per mature tree
- A minimum of 400 trees per seller; 100% "African indigenous" species & select fruit trees; Minimum of 20 years before harvest
- Staggered payments: **Year 0**: 30% of total payment, 50% of the intended number of trees has been planted; **Year 1**: 20% of the total payment, 100% of the intended number of trees has been planted and a 100% survival rate; **Year 3**: 20% of the total payment, minimum 85% survival rate; **Year 5**: Up to 20% of the total payment, pro-rated according to growth performance; and **Year 10**: Up to 10% of the total payment, pro-rated according to growth performance
- Third Party Verification at Year 5 (completed by RF Alliance)
- As of Dec 2007, over US \$300,000 worth of credits sold; 200 farmers connected to buyers, 200 applications being processed.

 New buyers coming in- Model being replicated in other areas in Uganda

+Carbon-continued

- Reforestation of degraded forest reserves: Kikonda Climate Project (Carbon Fix certified, seeking CCBA certification; selling via web) Uganda Nile Basin Reforestation: US\$ 430,000 worth of credits purchased by WB---many more
- SEQUESTERING CO2 THROUGH THE USE OF EFFICIENT STOVES —Reduced pressure on forests; less exposure to pollutants; employment, livelihoods. 1st Gold standard project in Uganda- credits sold on open market; Other potentials in Tanzania and Kenya
- Many other projects: methane reduction/cogeneration – selling to WB PCF & BCF

+Carbon-cont'd

• GROWING OPPORTUNITIES IN THE PRIVATE SECTOR:

- Airlines; e.g Safari link offsetting travel by paying for reforestation around Mount Kenya [Born Free Foundation]- industry wide approach needed
- Hotels: Ecotourism Kenya Rating scheme to include points for carbon offsets- carbon emissions calculators installed in some hotels
- Tea Sector: Emissions from Fuel Switching: UNEP Greening the Tea Industry Project
- Coffee Sector: Exploring CO2 from shade trees;
- Businesses aiming for carbon neutral being encouraged to buy local credits- ROI not clear yet.
 Still need to make the case

Payments for Watershed services

- Downstream corporate users compensating upstream-TZ EPWS project (DAWASCO-US\$ 100,000, Coca Cola)
- Working for Water-South Africa- 450 million SA Rand paid by Govt annually to clear land of invasive alien species
- Many projects in the pipeline Kenya Sasumuwa Dam, Green Water credits etc etc
- Potential for water quality trading similar to Chesapeake Fund?- Lake Victoria, Nile Basin?

Payments for Biodiversity Conservation

- TRUST FUNDS TO CHANNEL PAYMENTS FOR BIODIVERSITY CONSERVATION: e.g Uganda MBIFCTconservation of the mountain gorilla (Total value of trust fund now US\$6.8 million. Interest on the Fund is used for conservation and development activities)
- COMPENSATION FOR BIODIVERSITY CONSERVING MANAGEMENT: Kitengela Wildlife Lease Programme; US\$8 per acre per annum is paid to members who volunteer to set aside land. Aim is to cover 60,000 acres of land;
- Also-agreements with communities to manage sections of protected areas in return for access. Uganda (forests and national parks), Tanzania (Wildlife Management Areas, CBFM) Kenya (conservancies) – there is potential to bundle this with REDD credits for communities managing forest reserves

Payments for Biodiversity Conservation

PAYMENT FOR ACCESS TO SPECIES OF HABITAT: tourism- gate fees, user levies, research permits-

PURCHASE OF HIGH VALUE HABITAT FOR BIODIVERSITY CONSERVATION: Chimpanzee Sanctuary, Turtles, Cheetah, ..etc

PAYMENTS FOR BIODIVERSITY CONSERVING BUSINESS e.g Premiums from certification – fair trade, rain forest alliance, café practice, Organic products etc/ Ecolodges and conservancies charge 15% conservancy fees per night!

PAYMENTS FOR OFFSETTING BIODIVERSITY LOSSES : Oil sector- Uganda, Mining- Ghana, Madagascar, South Africa—etc [BBOP]

+

Key Issues/Challenges

- Definition: What is PES and what is not PES?
- Benefits capture /Trade offs not well analysed
- Equity Issues/Negative spin offs for non participants
- Attribution: particularly biodiversity
- Lack of science: hydrology studies to support PWS
- Lack of Capacity/Institutions /High transaction costs
- Not much Government support –though that is changing with REDD

- Growing awareness and interest in PES—particularly carbon – but demand for clean water, and water supply likely to catalyse PWS.
- Since carbon is an international product as well as being fungible, means that in many cases the expertise developed can be transferred between countries.
- Increasing demand for carbon credits from Africa: "charismatic carbon" but challenge is getting CREDITS THAT MEET BUYER REQUIREMENTS certified/verified..etc
- The rapidly developing REDD agenda: Funds for REDD readiness CB from FCPF, UNREDD etc

Needs to make it happen

- Targeted support to projects to get them to market: Need to understand hierarchy of challenges faced by rural communities –there are no quick fixes
- Facilitating the process of developing a set of understanding and skills about the opportunities and limitations of payments for ecosystem services.
- Institutional Capacity Building and sharing of best practice from within the region and outside
- Strategic partnerships with existing NGOs, networks in order to achieve policy leverage and impact
- More private sector buyers-including local buyers-
