

Presentation given at the

## **WCS Workshop on Land Change Modeling for REDD**

October 25– 29, 2010

Wildlife Conservation Society - Bronx Zoo  
Bronx, New York, USA

Hosted by

Clark Labs and the Wildlife Conservation Society

This workshop was generously supported by the American people through the United States Agency for International Development (USAID), under the terms of the TransLinks Cooperative Agreement No.EPP-A-00-06-00014-00 to the Wildlife Conservation Society (WCS). TransLinks is a partnership of WCS, The Earth Institute, Enterprise Works/VITA, Forest Trends and the Land Tenure Center. The contents are the responsibility of the authors and do not necessarily reflect the views of USAID or the United States government.

# Forest Cover Monitoring and Carbon Project in Sumatra, WCS Indonesia

Bonie Dewantara  
Bronx, NY Oct 28, 2010

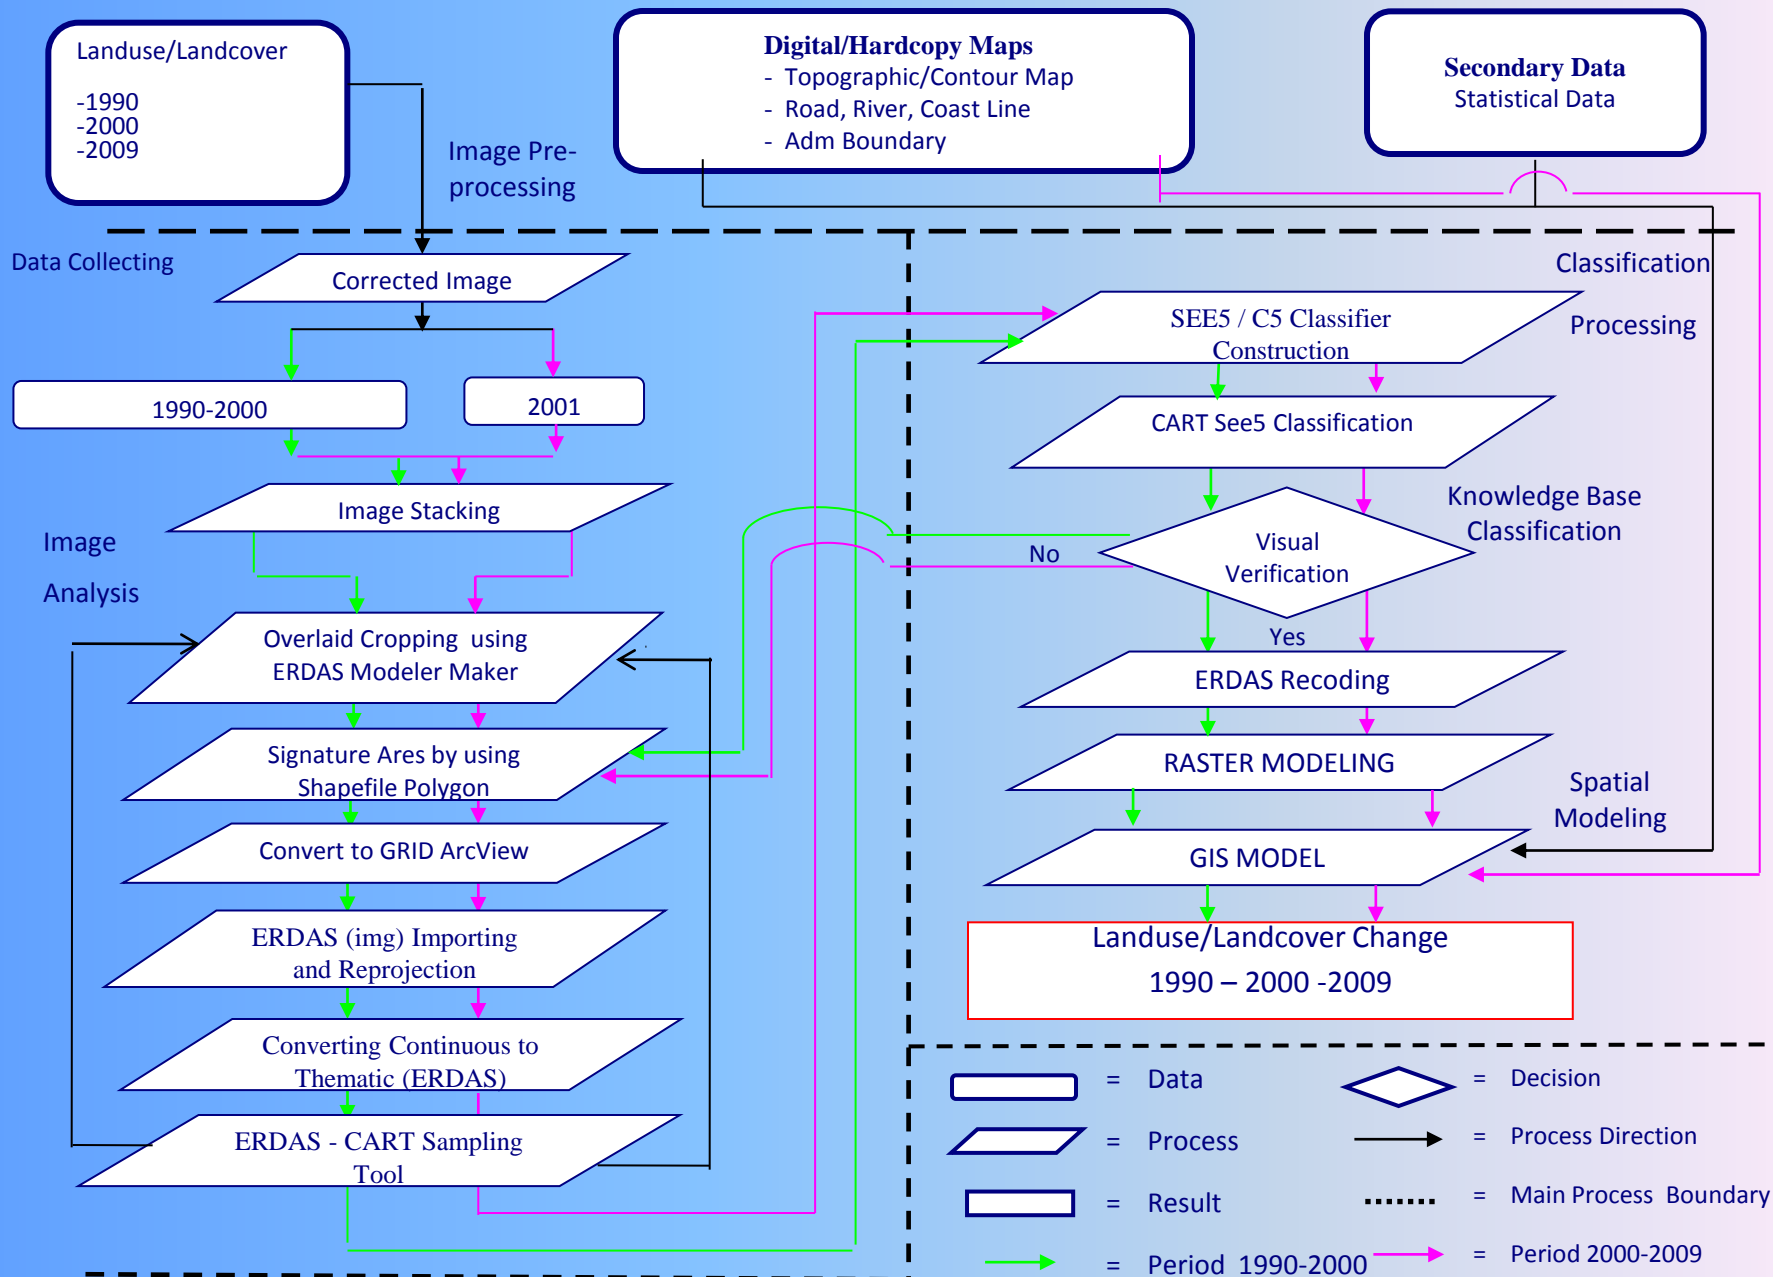

**WCS INDONESIA PROGRAM**

## Forest Cover Monitoring

- Deforestation in Sumatra started in 1900. In the period of 1985 – 1997 forest lost 6.7 million ha or 29 % from the all forest cover (WCS, 2005)
- As the comparison, predicted world deforestation 15 million ha per year. In the period of 1980 – 1999 Asia had deforestation 8,2 % (Contreras-Hermosilla 2000).
- Satellite based remote sensing was used for obtaining information position, condition and the area in a periodic of time and getting more accurate data with consuming shorter time.

- WCS Indonesia Program had collaboration with Conservation International to interpret forest cover change in Sumatra in 10 years period (1990-2000), used “Stacking” method that was developed by Center for Applied Biodiversity Science (CABS), Conservation International, and further developed by WCS IP for raster editing in order to possess accuracy enhancement.
- “Change Detection Analysis” in Sumatra island wide used, Landsat TM and ETM satellite imagery with acquisition date circa 1990 and 2000.
- Interpretation result showing that Sumatera had lost forest in ten years (1990-2000) 5 million ha, or more less 500 thousands ha/year. Decreasing from 19,6 million ha to 14,6 million ha, in average 2,6% per year. Mangrove had lost from 489 thousand ha to 435 million ha.
- Accuracy assessment was done by high resolution imagery IKONOS and QuickBird defined by available image that must be closed to yang Landsat acquisition date. By using randomly 479 points, getting overall accuracy 95,8%.

# Outcomes

2000

# Outcomes

1990

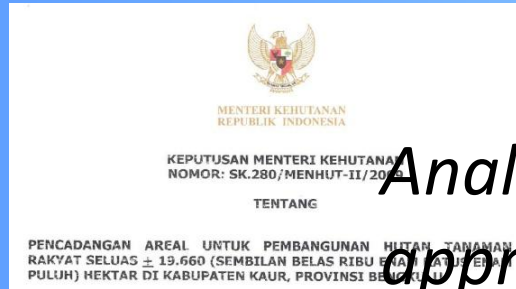

# Outcomes

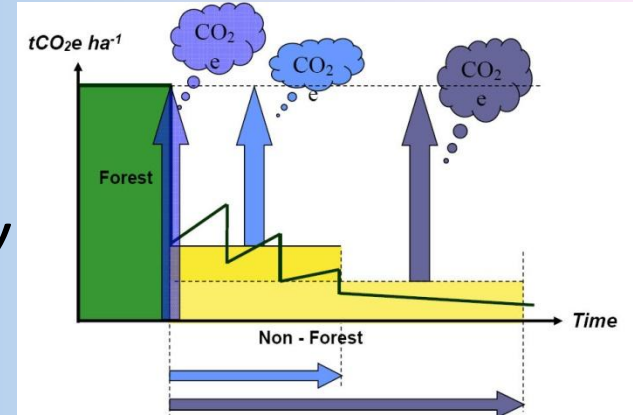

2000

# Forest Carbon Project

*Analytical and participatory approaches for integrating environmental and social consideration into policies, plans and programs and evaluate the inter linkages with economic and institutional considerations*

# Implementing conservation goals through a sustainable landscape

- Require integrating conservation together with land uses which deliver human wellbeing benefits
- Sustainability needs a *holistic* approach
  - Protecting species, ecosystems, and ecological processes
  - Generating sustainable livelihood options, crops land, agricultural, community forest
  - Integrating human wellbeing into regional development planning
- Finding *spatial options* for development that are consistent with allocating biodiversity, eco-settlement, agricultural, crop healthy ecosystems, e.g., REDD, etc

# Assessing Tradeoffs for Decision Making

Oil Palm Suitability

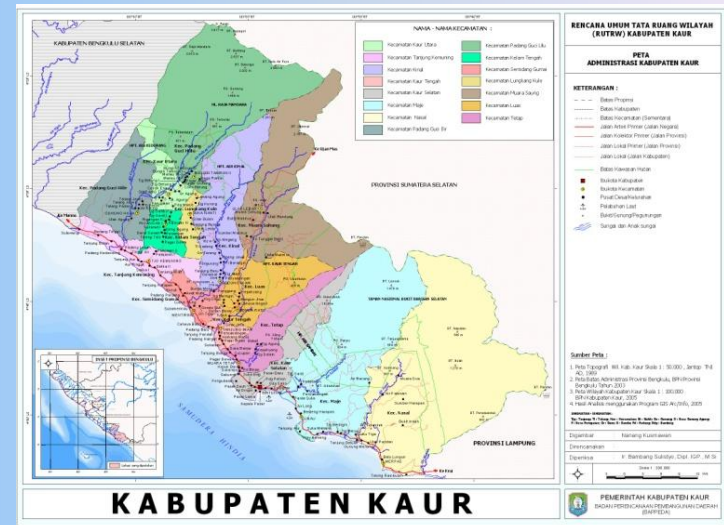

Forest Carbon Potential

Tiger habitat suitability

**Spatial Tradeoffs:** Agriculture, Ecosystem Services and Conservation suitability

**Spatial Planning**

# Agenda

## Policy Session

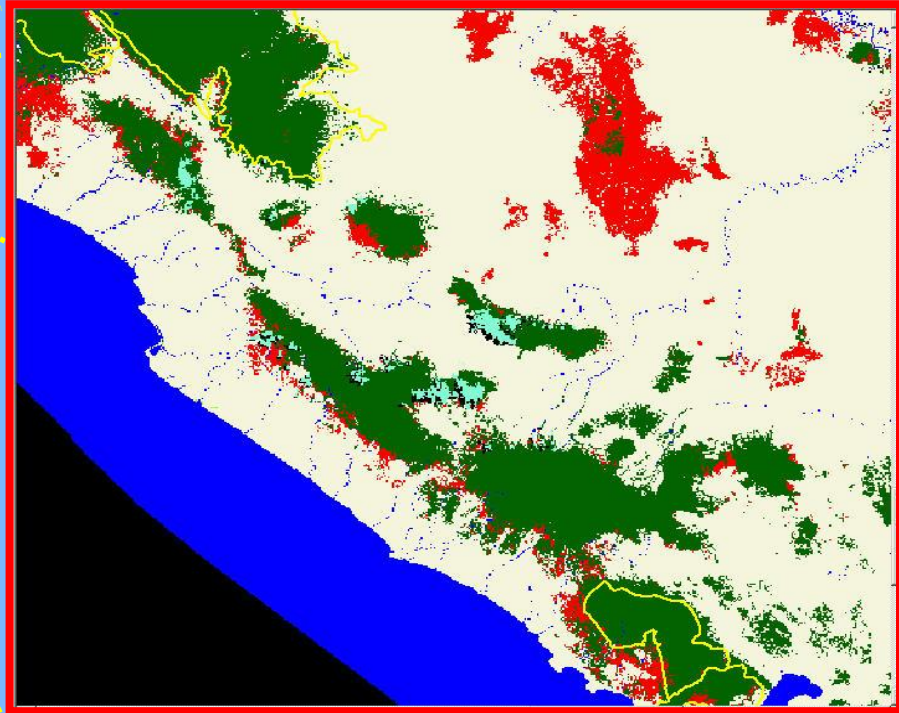

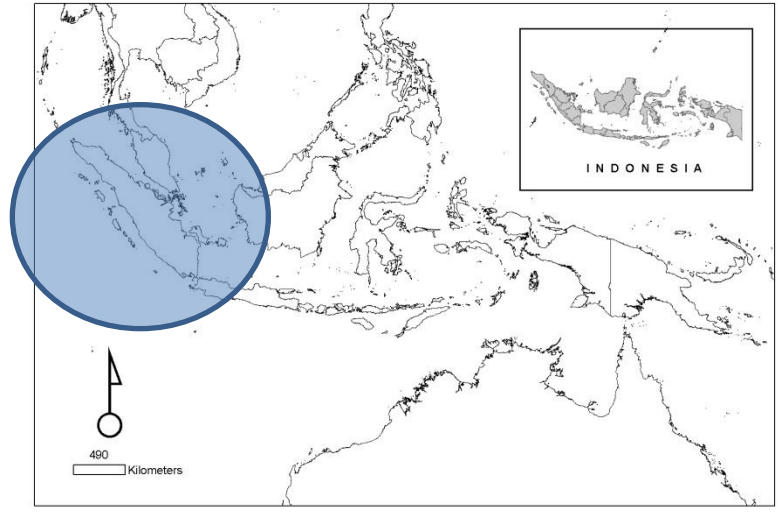

- Case-Study of REDD Demonstration Activities in scope of national level and sub-national level
- Developing institutional model for local government (*loc gov't owned company*)
- Local Regulation must be created by the act of the elected regional-parliament as a basic for LGOC for completely *controlling the mechanism, structure, rights and obligations shareholder, and benefit sharing, and other code of conducts*
- LGOC can legally be granted exclusive access to *manage forest and carbon market*

# Technical Session

- REDD planning on the ground – trade off analysis, with ecologically and economically aspect: Suitability Area for Tiger compare with Suitability Area for Palm Oil
- Landscape planning with REDD. District, sub-district level (Spatial Planning)
- Developing baseline, monitoring and modeling.
- Follow up the steps of Project Design Documents (PDD), project activities, baseline and monitoring method, environmental impact, stakeholders comment
- REDD Readiness.

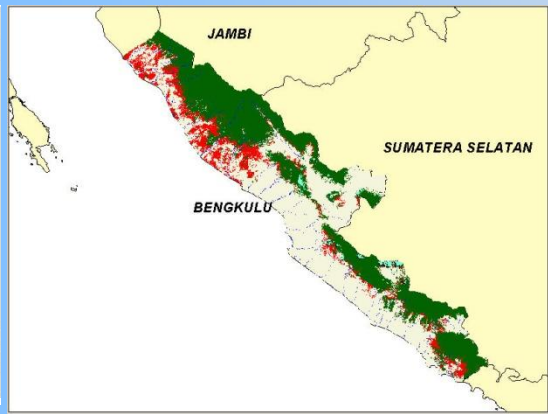

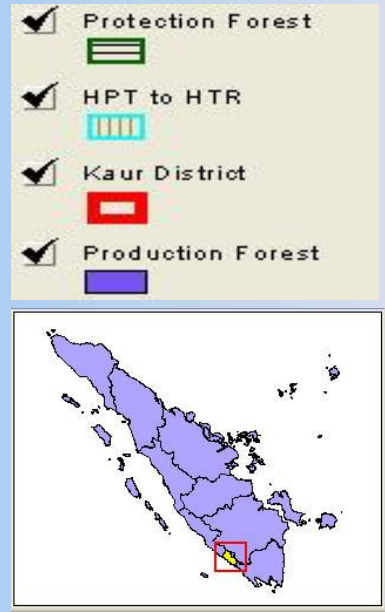

1. Develop Project Idea Note (feasibility study)
  - 1a. Identify drivers of deforestation & additionality
  - 1b. Analysis of existing deforestation rates
  - 1c. Choose VCS carbon accounting methodology
  - 1d. Estimate potential carbon emission reductions
2. Discuss with host government
3. Seek project development funding
4. Project Design
  - Including collection of data for current and future baseline assessment
5. Creation of PDD
6. Host Country Approval
  - Including legal mechanisms for carbon ownership and disbursement of carbon funds
7. Project Validation
8. Project Registration
9. Project Implementation
10. Verification
11. Credit Issuance

# Develop Project Idea Note (feasibility study)

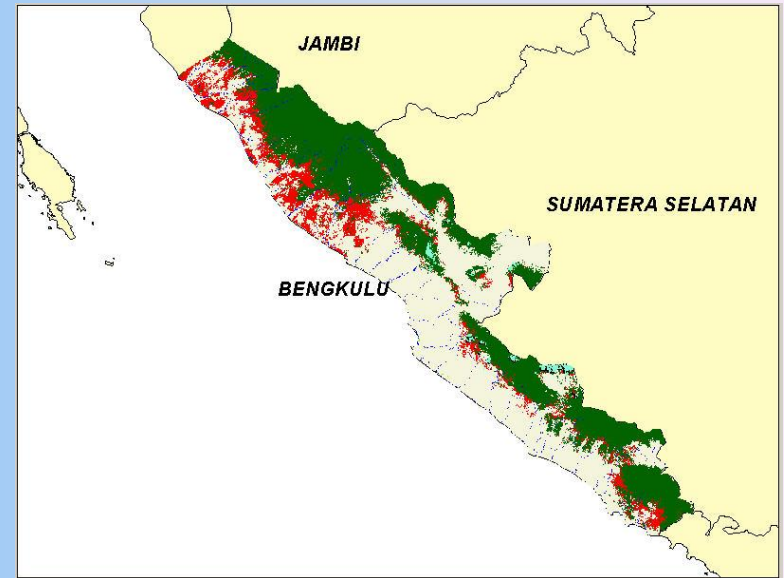

## Project Site

## Identify drivers of deforestation & additionality

### Driving Factor of Deforestation (Potential Deforestation Model)

- Elevation
- Slope
- Aspect
- Distance to cities
- Distance to Forest Concession Area
- Distance to Forest Estate Area
- Distance to Plantation Area
- Distance to River
- Distance to Main Road
- Distance to Transmigration Area

Elevation

Slope

Aspect

Dist to City

Forest Concession

Forest Estate

Plantation

Transmigration

River

# Method & Survey Design

## Method :

- Voluntary Carbon Standard (VCS)

## Survey :

- GIS Analysis : Survey Area (Forest Cover), Stratification (altitude)
- Sampling Design
- Field Survey Data
- Survey Equipment

DBH meter

Ultrasonic range finder

Laser Hypsometer

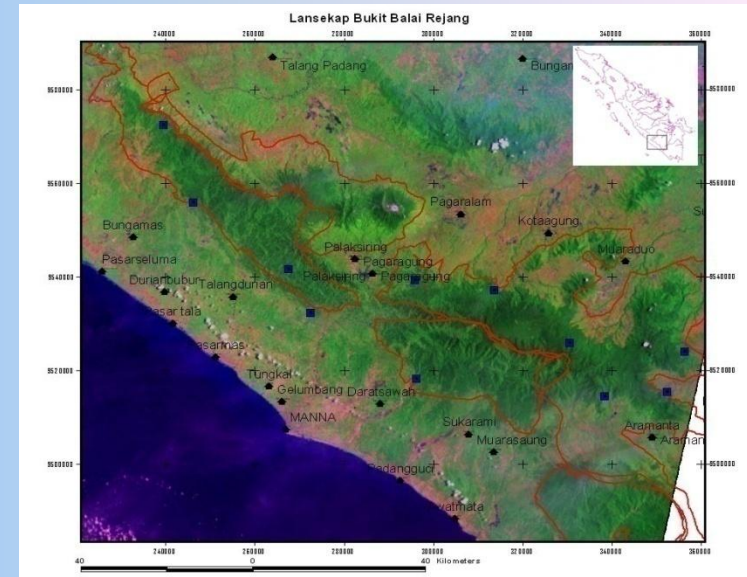

Compass

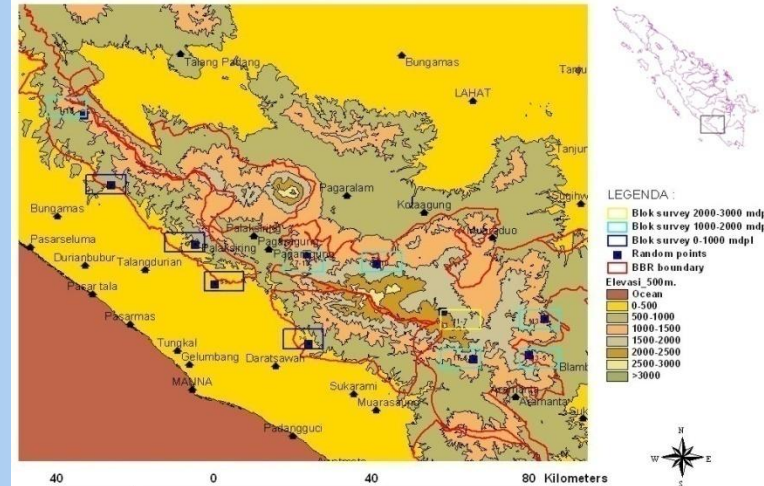

GPS

Meter Tape

BBR Elevation Design sampling

# Plot Design / Field Data Collecting

- Small Plot  
Radius: 5.64 m = 0.01 ha  
Tree: 5 – 20 cm DBH
- Medium Plot  
Radius: 12.62 m = 0.05 ha  
Tree: 20-50 cm DBH
- Big Plot  
Radius: 17.84 m = 0.10 ha  
Tree: > 50 cm

# Ground Survey Result

- Biodiversity Index (Shannon index) 4.5, dominated by family *Euphorbiaceae* and *Lauraceae*
- Carbon stock per altitude
  - 0-1000 = 200-300 ton/ha
  - 1000-2000 = 250-350 ton/ha
  - > 2000 = 350-500 ton/ha
- Average Carbon stock 300 ton/ha

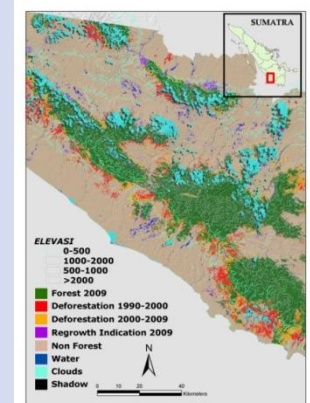

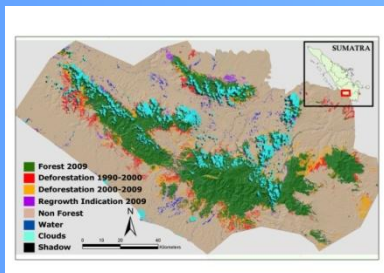

*Note : unincluded dead wood and wood density*

- Need fixed boundary from Pemda, in order to consequently area calculation.
- Need yearly deforestation prediction for Kaur District

# Community Forest Engagement

As an approach for Carbon Project site

# RENCANA UMUM TATA RUANG WILAYAH (RUTRW) KABUPATEN KAUR

## PETA KAWASAN HUTAN KABUPATEN KAUR

### KETERANGAN :

- Batas Propinsi
- Batas Kabupaten
- Batas Kecamatan
- Jalan Arteri Primer (Jalan Negara)
- Jalan Kolektor Primer (Jalan Provinsi)
- Jalan Lokal Primer (Jalan Provinsi)
- Jalan Lokal (Jalan Kabupaten)
- Batas Kawasan Hutan
- Ibukota Kabupaten
- Ibukota Kecamatan
- ⚓ Pelabuhan Laut
- ▲ Bukit/Gunung/Pegunungan
- ~ Sungai dan Anak sungai

### Nama - Nama Kawasan Hutan :

- Areal Penggunaan Lain
- HL. Raja Mandara
- HP. Air Sambat
- HPT. Air Kedurang
- HPT. Air Kinal
- HPT. Bukit Kumbang
- HPT. Kaur Tengah
- TNBBS
- TWA. Way Hawang

### Sumber Peta :

1. Peta Topografi Wil. Kab. Kaur Skala 1 : 50.000 , Jantop TNI AD, 1989
2. Peta Batas Administrasi Provinsi Bengkulu, BPN Provinsi Bengkulu Tahun 2003
3. Peta Wilayah Kabupaten Kaur Skala 1 : 100.000 BPN Kabupaten Kaur, 2005
4. Peta Kawasan Hutan Propinsi Bengkulu, Skala 1 : 250.000, Dinas Kehutanan Propinsi Bengkulu, 2002
5. Hasil Analisis menggunakan Program GIS Arc/Info, 2005

Digambar : Nanang Kusmawan

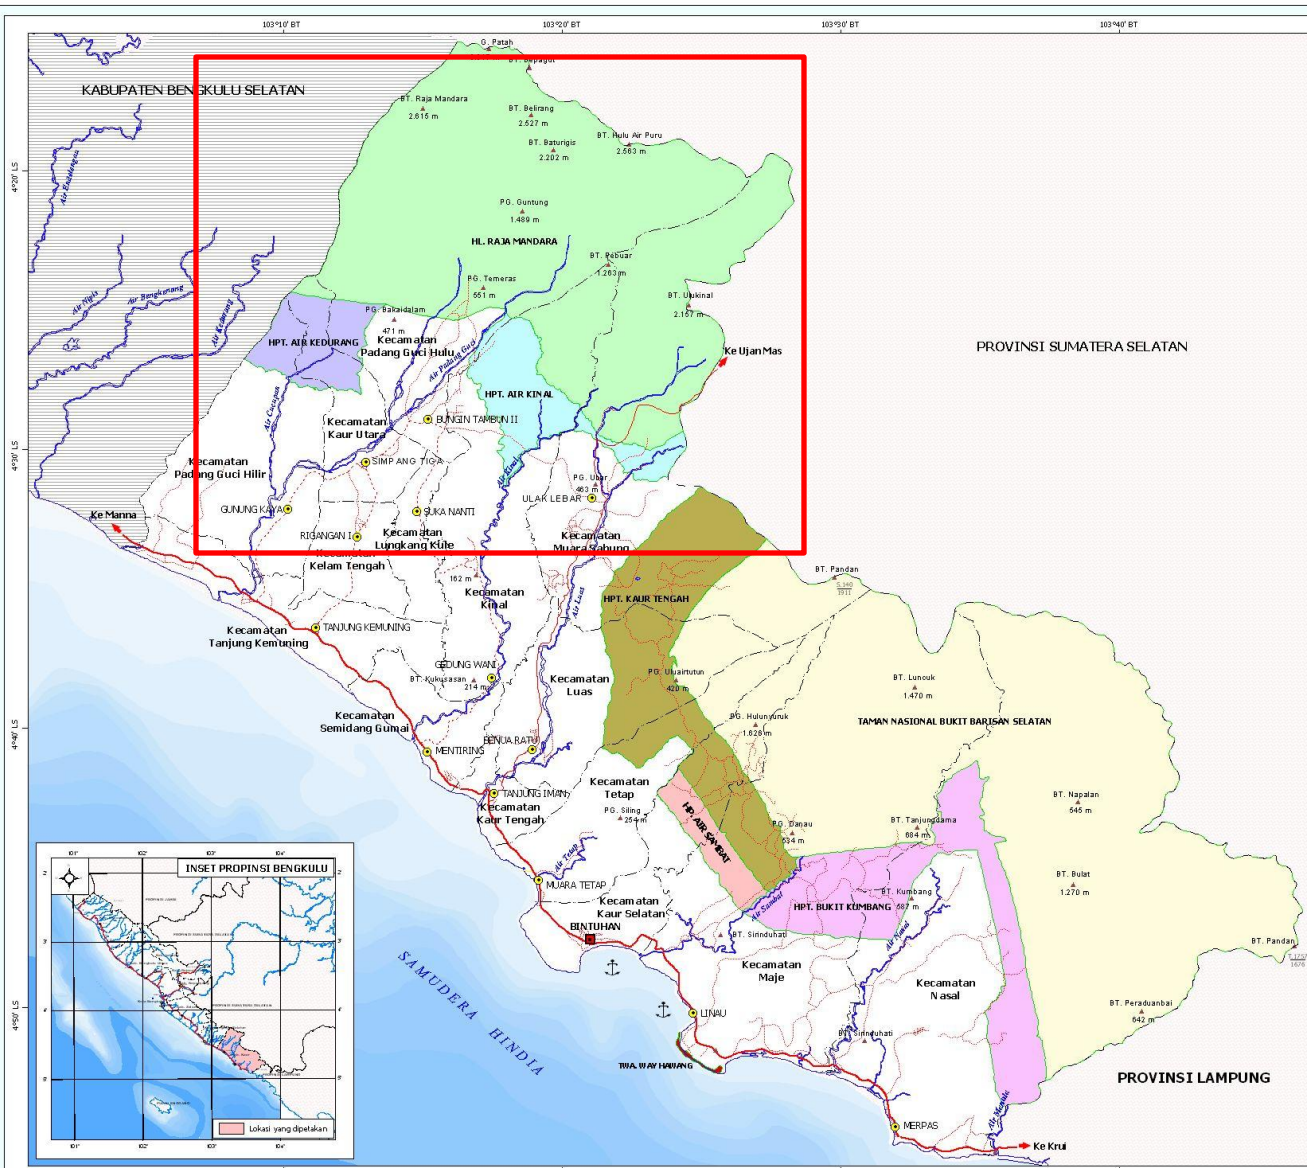

Direncanakan :

Diperiksa : Ir. Bambang Sulistyio, Dipl. IGP., M.Si

Skala 1 : 300.000  
0 3 6 9 12 Km

PEMERINTAH KABUPATEN KAUR  
BADAN PERENCANAAN PEMBANGUNAN DAERAH (BAPPEDA)

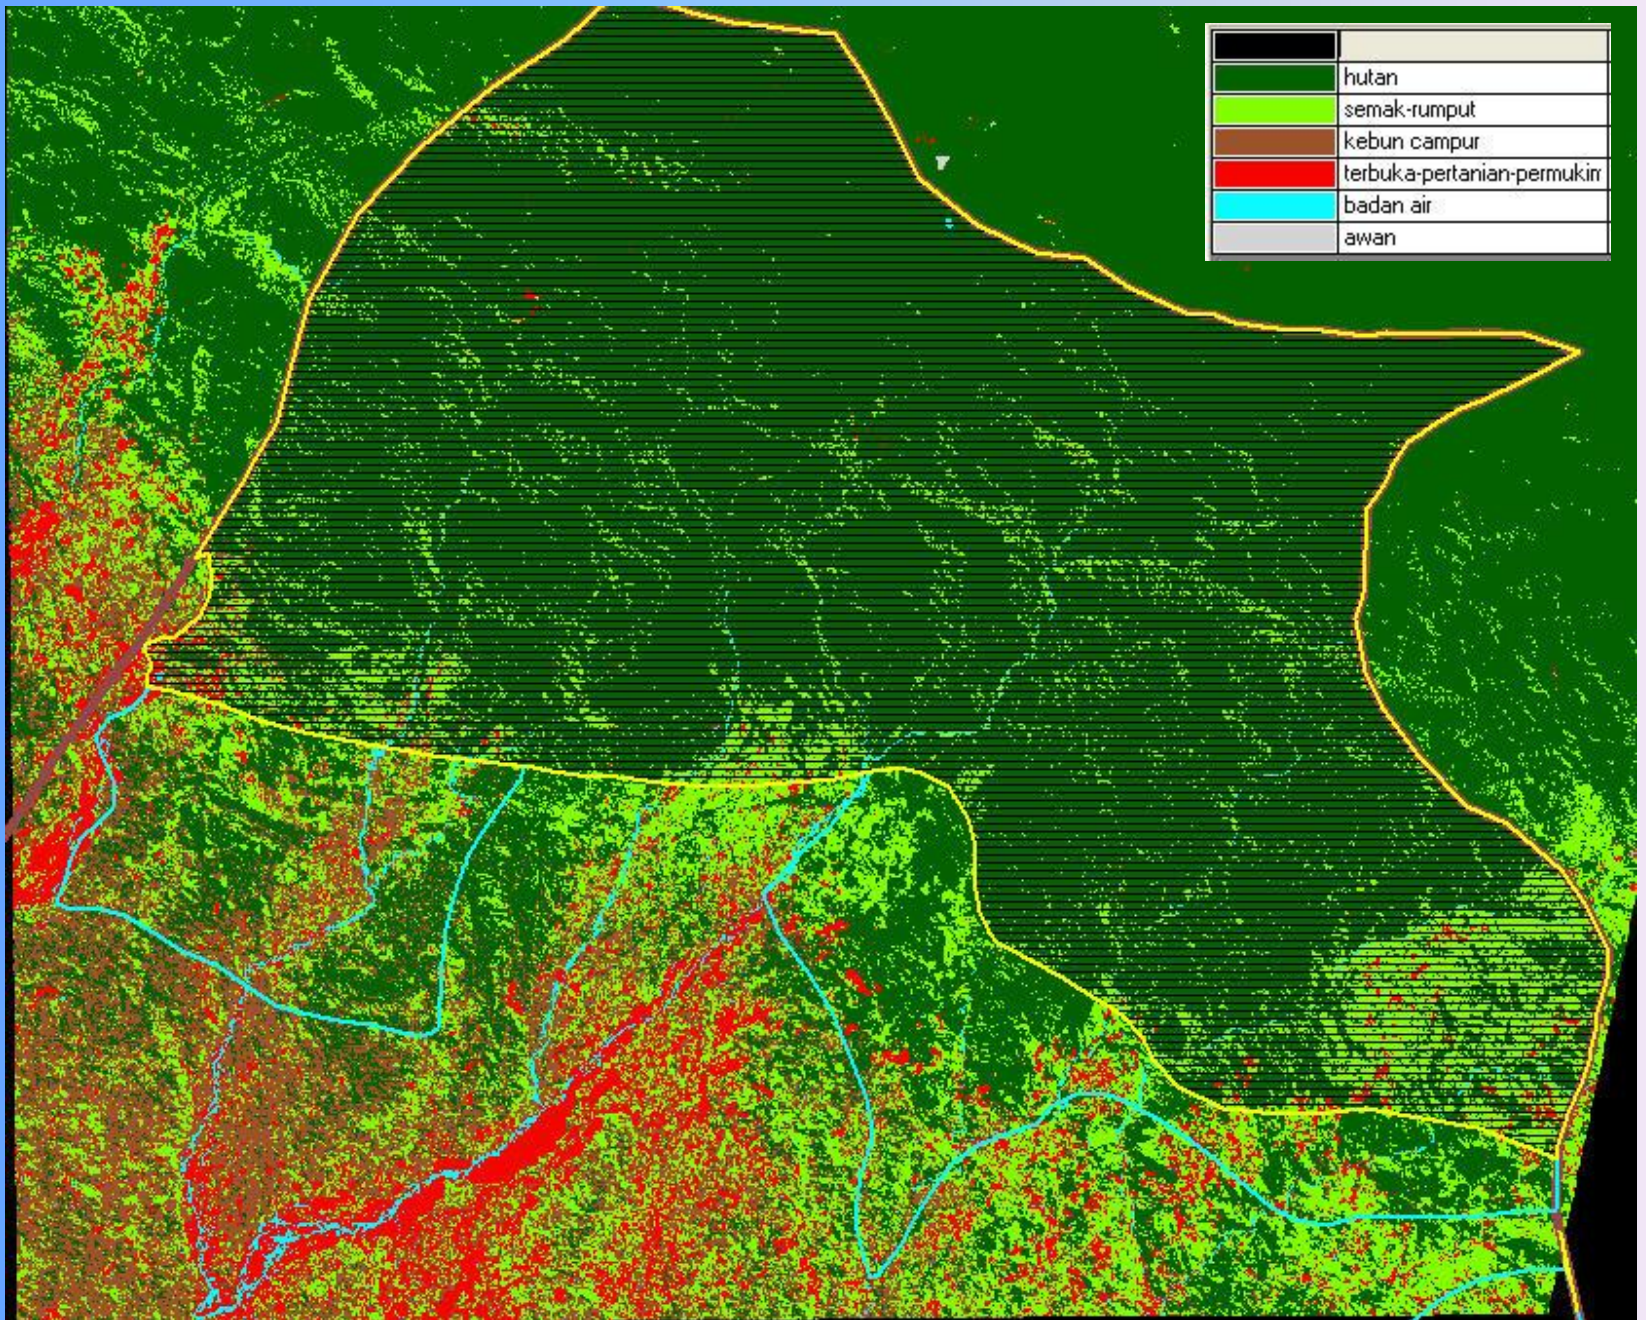

# KABUPATEN KAUR

# Strategic Planning

- Limited Forest Production (HPT):
  - Air Kedurang 4.055,32 ha
  - Air Kinai 5.567,77 ha
- Continue to HPT Kaur Tengah and HPT Bukit Kumbang with total area 13.932,27 and 10.732,91 ha, where adjacent area with BBS NP
- Adjacent boundary with Protection Forest (as the Project Area)
- Additionality for “agreement mechanism” for growing forest timber and multi purpose tree species (MPTS) with 70% : 30%, and another utilization option
- Guiding / Technical Assistance for High Value Conservation and timber extraction (meeting with the 70:30)
- Could be a part of this project area, with REDD mosaic mechanism
- Project area buffer
- TFCA (Tropical Forest Conservation Act) supporting
- Green PNPM Supporting
